Idea2Team – Freelancer & Startup Team Finder Platform (Web Application)

Definition: Idea2Team is an intelligent web-based platform that connects startup founders, students, and small businesses with freelancers and skilled team members for short-term freelance work and long-term startup collaboration. The platform allows founders to post project ideas along with required skills, project stage, and collaboration type (paid, equity, or learning). The system automatically suggests suitable candidates using smart matching and also provides a built-in workspace for communication, task management, and collaboration.

Functional Requirements

- **User Management**

  1. User Registration and Authentication

  - Users can sign up and log in using email credentials.
  - Role-based login (Founder/Freelancer/Admin).
  - Users can reset passwords securely.

  2. User Profiles

  - Users can create and update their profiles.
  - Freelancers can add skills, portfolio, and experience.
  - Admin can manage user roles and permissions.

- **Project Management**

  1. Project Posting

  - Founders can post ideas/projects with required skills.
  - Select project stage (Idea / Prototype / Launch).
  - Select collaboration type (Paid / Equity / Learning).
  - Add optional budget and timeline.

  2. Project Control

  - Founders can edit/delete projects.
  - View applications and shortlisted candidates.

- **Search & Filtering**

  1. Search Options

  - Search by skill, project title, or keyword.

  2. Filters

  - Filter by location, experience level, rating, availability.
  - Local talent priority option.

- **Collaboration & Communication**

  1. Chat & Notifications

  - Real-time messaging system.
  - Notifications for invites, applications, and updates.

  2. Mini Workspace

  - Task management (To-do, In-progress, Done).
  - File sharing system.
  - Notes and planning tools.
  - Internal team chat.

- **Feedback & Rating**

  1. Reviews

  - Founders and freelancers can rate each other.
  - Written feedback supported.

- **Admin Management**

  1. Platform Monitoring

  - Manage users and projects.
  - Remove fake or inappropriate content.

  2. Security & Reports

  - Handle user reports.
  - Monitor platform activity and analytics.

- **Hardware Requirements**

    1. Processor: Intel i5 / Ryzen 5 or above
    2. RAM: Minimum 8 GB
    3. Storage: SSD recommended for fast performance
    4. Network: Stable internet connection
    5. Browser: Chrome, Edge, Firefox supported

- **Software Requirements**

    1. **Frontend Technologies**
        - HTML, CSS, JavaScript for web application.
        - Frameworks: React
    2. **Backend Technologies**
        - Server-side languages: Node.js + Express.js
    3. **Database**
        - Relational Database Management System (RDBMS): MySQL with Xampp
    4. **APIs and Tools**
        - JWT Authentication
        - Socket.IO for real-time chat
        - Git & GitHub for version control
        - VS Code IDE
